

HOST GUIDE

Tempo Host Instruction Book

From first login to a full multi-round show — prep, save, print, play.

Written for teen readers: short steps, plain words.

1. What you're doing

You're hosting **music bingo**: songs play, players mark squares, someone wins.

Tempo pulls tracks from **Spotify** and/or **YouTube Music**, helps you plan **rounds** (like chapters), and lets you **prep**, **save**, and **print cards** before the crowd shows up.

Tab	Use it for...
Manager	Playlists, rounds, music login, round prep
Game	Live show: play snippets, host controls

2. Before you open Tempo

- Use **Chrome** or **Edge** on a laptop if you can.
- Have **Spotify** and/or **YouTube Music** ready — match whatever you'll play from.
- Know how you sign in as **host** (only hosts drive the game).

3. First-time in the room

A. Open your room

Join your Tempo room as **host**. Players join separately — they don't pick playlists.

B. Connection

1. Open **Connection** (Spotify / device / YouTube — labels vary).
2. Connect **Spotify** if you use Spotify playlists.

3. Connect **YouTube Music** if you use YouTube-only playlists.

No connection = Tempo can't see your playlists. Fix this before anything else.

C. Pick the speaker

Choose where audio goes (speaker, mixer, Bluetooth). Test volume once.

4. Playlists & pool modes

Five playlists (5×15 style)

- You pick **five playlists**.
- Each one lines up with a **column** on the big call board when the room is in that layout.
- Great when each list has a theme (90s, rock, one artist, etc.).

One huge playlist (1×75 style)

- One list with **lots of songs** turns into one shared pool.
- Simpler vibe, fewer columns to think about.

If Tempo warns you about "not enough songs," add tracks or pick different lists — don't ignore it.

5. Rounds = chapters of your night

Rounds split the event (opening, themed game, finale). Each round usually has:

- A **name**
- **Playlists** tied to that round
- A **status** (planned → playing → done)

You move rounds forward when *your schedule* says so — Tempo doesn't rush you.

6. Load for prep (practice without an audience)

You do **not** need to "start the live game" just to get organized.

Load for prep:

- Puts that round's playlists into the **mix**
- Syncs your **bingo pattern** controls with that round
- Lets you rehearse while it's still quiet

Use this before doors open: load Round 2, tweak pattern, hit Save round, print PDFs — no crowd required.

7. Save round (freeze your rehearsal)

Save round stores a **snapshot** of that round after the mix rules run (trimming, layout, etc.).

- Show night can match what you rehearsed.
- If you change playlists a lot, **save again** so the snapshot stays true.

8. Finalize mix (lock the bingo pool)

Finalize builds the **official song pool** for cards and display.

- Required before **printing PDFs** and solid digital cards.
- If it fails: playlists didn't load, rate limits, or connection glitch — refresh library, wait a minute, retry.

9. Printable PDF cards

- **Cards per PDF** = how many unique printed sheets (often 30).
- **Round & event management** → **Print PDF** and **Game tab** → **Download PDF** use the **same rules** on the server — same random logic, same bingo shape. Only the PDF subtitle may show the round name.
- You still must **finalize** first — same rule everywhere.
- Set card count on the **Manager** tab or inside the round popup — they stay matched.

10. Round & event management (the popup)

Open **Round prep & PDF** from Manager.

Inside you'll see overview stats, card count, and per-round actions:

- **Load for prep**
- **Save round**
- **Print PDF**
- **Start** when it applies

Use this when you're thinking about the **whole event**, not only "right now on stage."

11. Running a multi-round live game

1. **Manager:** playlists on rounds look correct.
2. **Prep:** load round → finalize if needed → save round → print if you need paper.
3. **Game tab: Start Game** when the room is ready.
4. Music plays as **snippets**; titles show on the **public display**.
5. Players mark cards → bingos get checked.
6. **Next round:** finish or advance the round, **load for prep** for the next playlists, finalize/save if your workflow needs it, then continue.

If the projector columns look wrong after big edits, you probably need to **finalize again** so the locked pool matches what everyone sees.

12. Quick fixes

Problem	Try
Empty playlists	Reconnect Spotify/YouTube; refresh library
Finalize failed	Wait out rate limits; fewer giant playlist pulls at once
Weird printed cards	Finalize <i>after</i> your last playlist change
YouTube vs Spotify confusion	Use the service you actually connected

13. Night-before checklist

- ☐ Host login works
 - ☐ Spotify or YouTube connected
 - ☐ Speaker device picked
 - ☐ Every round has playlists
 - ☐ Load-for-prep tested on rounds you care about
 - ☐ Save round after a happy rehearsal
 - ☐ PDF printed if you need paper
 - ☐ Pattern + free-space double-checked
 - ☐ Public display bookmark / casting ready
-

Prep slow, party loud. You've got this.
